CES 2006

January 5th 2006

Bolzano Villettri offers the Center Channel Cantoria with counter-aperture for any Customer's wishes

Las Vegas, Nevada, January 5, 2006 – Bolzano Villettri today introduces the Cantoria (HF 3001), a 2-way center channel of the Campanile series boasting RoundStream Technology alongside other company products. The channel speaker will be displayed at Alexis Park Booth #2153.

Any loudspeaker system will be incomplete without a center channel. This is a key item contributing much to the level of music performance reproduced by the whole system. This prompted the manufacturers to create a future product - a center channel speaker for a home theater system notable for the ultimate in distinct and panoramic sound and featuring unheard-of dynamics.

The results achieved exceeded all possible expectations. Cantoria reproduces stunning; ground shaking explosions or crystal clear whispers, while keeping full, continuous control over sound distribution. As stated by Bolzano Villettri, your home theater system will definitely be missing Cantoria without its capability for the most precise performance.

This fabulous “talent” was realized due to a counter-aperture applied in the channel. The 360° sound output allows the achievement of pure sound, not distorted any more; you can also hear the same magic sound from any location within your house.

Manufacture of Cantoria followed the production of two floorstanders, Torre and Piazzetta, of the Campanile line-up. Three irresistible beauties are now found working in unison while meeting the highest demands made on a modern home theater. Like its predecessors, Cantoria has noble and delicate lines and luxurious finishes (high-gloss veneer). You can select among a number of the most astonishing finishes for the speaker that will definitely embellish any interior.

Bolzano Villettri's motto is to provide stupendous design and ideal sound picture; only on that condition can the brand capture the attention of the most demanding consumers. Should you choose Bolzano Villettri, irritating coloring and fluctuations will be a thing of the past. The company is currently working hard to extend the product line-up and to achieve true excellence by delivering your favorite music and movies in real time and sound.
